

Transform Your Wide Area Network

Silver Peak software unifies the cloud, Internet and enterprise WAN on a single fabric, giving IT visibility and control over the new cloud-driven network while ensuring consistent performance for all enterprise applications.

Silver Peak deployed in data centers, branch offices and cloud hubs creates a network overlay that controls and accelerates connectivity to any enterprise services, IaaS resources and SaaS applications.

By solving network bandwidth, distance and quality challenges, Silver Peak customers backup and recover more data in less time, gain faster access to cloud and enterprise applications, and safely migrate enterprise apps from costly, complex private links to the Internet.

An Intelligent WAN Fabric

Silver Peak Unity correlates information about cloud services and Internet “weather” to intelligently route traffic over a secure, optimal path.

Monitor. Gain insight into everything happening on your WAN, including SaaS applications outside of IT (Shadow IT).

Control. Prioritize business critical traffic while restricting recreational or personal use traffic.

Optimize. Provide users with consistent performance for all applications, including SaaS.

Building a Software Defined Wide Area Network (SDWAN)

The Data Acceleration Leader

If you want to optimize connectivity between data centers or branch offices, accelerate replication over distance, or extend your network to the cloud, Silver Peak is for you.

#1 WAN Optimization Solution

Virtual flexibility. Silver Peak software runs on every major hypervisor, and can be downloaded and deployed from anywhere in the world via Silver Peak’s software marketplace.

Superior scalability. Silver Peak delivers the highest-performance virtual and physical WAN optimization, scaling to multi-Gbps of throughput and 500,000+ simultaneous flows.

Any application. Only Silver Peak improves the performance of all enterprise and SaaS applications, regardless of transport protocol or version — all without the risk of corrupting data or altering application behavior.

Replication Acceleration

Silver Peak combines advanced data acceleration technology with specialized VRX software products, deployment methods, and pricing options to deliver 20x faster remote replication performance. Silver Peak overcomes network bandwidth, distance and quality challenges to help customers easily meet their recovery point objectives (RPOs). Deployment takes less than 20 minutes and requires no networking expertise.

Silver Peak replication acceleration products are compatible with any IP-based backup and replication product, including those from Dell, EMC, HDS, HP, NetApp, IBM, and others.
